

Master thesis/Project work

Topic

- Metallization and contacting of Si-based Solar cells
- Integration of passivating contacts into Solar cells

Tasks

- Photolithography using a mask less Laser lithography tool
- Dry and Wet etching of Dielectrics
- Metallization using vacuum based deposition methods
- Thermal post deposition treatment
- physical characterization using spectroscopic ellipsometry
- electrical characterization (current-voltage measurements)
- quantum efficiency measurements of solar cells
- presentation of results in group meetings

Your qualifications

- Strong perseverance in experimental work
- Self-organized and conscientious way of working
- Interest in microelectronics
- Basic understanding of semiconductor device physics
- Fluent in either English or German
- Ability to work in a team

We offer

- an inspiring international and open atmosphere
- a team consisting of a well-balanced mixture of PhD students, experienced Post-Docs from different fields and process/facility technicians
- focused guidance throughout the project
- on-the-job-training
- access to various high-end characterization and fabrication tools
- involvement in projects with research institutes and industry

Namlab

NaMLab gGmbH is a research organization and associated institute of the Technical University Dresden. NaMLab provides industry oriented and basic research in material science for electronic devices. Based on its key expertise in dielectric materials for semiconductor devices NaMLab focuses on the integration and application of materials applied to reconfigurable and energy efficiency devices. NaMLab's approach of placing the device rather than the material system itself into the center of its research activities differentiates it from other world class material research activities in the Dresden area. Additionally, it allows taking full advantage of the already existing expertise by forming orthogonal consortia. It therefore fills the gap between basic materials research and its application towards electronic circuits and systems.

Timeline:

- Starting date: as soon as possible
